Logic Processes and Site Map

Style Discussion:

The website was designed with modern styling that translates to mobile better than an older style of design. The site has consistent UI with buttons always being black and yellow and text inputs always being white to aid with user recollection. The site uses a fairly simple and bold color scheme to be recognizable without being overly complex to look at. All interactable elements also share rounded borders to aid with navigation. We also intend to use an ever-present header which will allow simple navigation to the key pages at any time.

All buttons will also have a slight change in color when hovered to help with feedback and make the site feel more interactive.
